Introducing the Water Research Quarterly: A Note from the Editor

I won't usually take up space in the *Quarterly* with *A Note from the Editor* as the real estate of the *Quarterly* is too valuable. But, for our first edition, I'd like to give an introduction to this new internal publication.

The *Water Research Quarterly* (WRQ) was born from the desire of Water's leadership to be kept current on the research and science activities taking place inside and outside of the Agency that may impact our own investigations, decisions, policy, or guidance. With that challenge in place, we evaluated mechanisms other research and science policy organizations use to get relevant and timely information to their stakeholders. We also reached out to ORD, USGS, Water Environment Research Foundation (WERF), Water Research Foundation (WaterRF, formerly AwwaRF), and National Science Foundation (NSF) to determine how to engage in information exchange and bring their efforts to light in the *Quarterly*. Working with Michael Fry, of the EPA Library, we set up a monthly literature search on all the journals Water program staff identified as being important to their projects.

Initially we were concerned we wouldn't have enough content for a *Quarterly*. We were hugely mistaken. Project and product highlights as well as upcoming meetings and RfPs were offered by ORD's National Program Directors and pulled from ORD and other Agency websites, skimmed from the above mentioned collaborators' websites and newsletters, and from over 500 journal hits (just for the month of June). Our original concept was a one-page, double-sided, flyer. Such an abbreviated publication would

EPA - SAB Draft Report: Office of Research and Development Strategic Research Directions and Integrated Transdisciplinary Research.

This 2010 report summarizes the outcome of meetings between ORD representatives and the SAB held on November 9-10, 2009 and April 5-6, 2010. The SAB concluded that ORD's current research and suggested strategic directions generally support ORD's key priorities.

The SAB had several recommendations. First, they recommended that ORD cultivate a systems approach in its research and provide leadership and support for transdisciplinary research teams. Because a systems approach emphasizes a holistic understanding of environmental problems, research teams need to cross disciplines. There are examples of such integrated research within ORD; the SAB suggests that this approach be implemented throughout ORD.

The SAB also recommended that ORD systematically strengthen its partnerships with states and tribes to gain their input and to develop interagency research projects. Investments in green chemistry, green engineering, and environmental justice were also encouraged. The SAB also recommends that ORD incorporate social and behavioral sciences into its work, noting that many strategies for addressing environmental problems have social and behavioral components.

Protecting Aquatic Life and Human Health from Chemicals and Microbes in Water

Inexpensive, Rapid and Comprehensive Virulence and Marker Gene (VMG) Analyzer for Waterborne Pathogens. AquaBioChip, LLC.

Reagentless Field-Usable Fixed-Site and Portable Analyzer for Trihalomethane (THM) Concentrations in Drinking Water. KWJ Engineering, Inc.

Rapid Concentration of Viruses from Water. Scientific Methods, Inc.

Innovative and Affordable Tools and Technologies for Sustainable Public Health Protection

Antimicrobial-Coated Granular Filter Media for Drinking Water Treatment. Coating Systems Laboratories, Inc.

Self-Healing Corrosion-Control Coatings: An Enabling Technology to Restore Aging Water Infrastructure and Permit Alternative Water Use for Cooling. NEI Corporation.

Development of a Simple, Robust, and Inexpensive Alkalinity Sensor. Technology Specialists.

Development and Commercialization of Granular Activated Carbon Microbial Fuel Cells for Wastewater Treatment and Power Generation. Fuss & O'Neill.

Protecting Aquatic Life and Human Health from Chemicals and Microbes in Water

Risk-Based Decision Making for Assessing Potential Impacts of Geologic CO₂ Sequestration on Drinking-Water Sources. Colorado School of Mines, University of Wyoming.

Effects-Based Cumulative Risk Assessment in a Low-Income Urban Community near a Superfund Site. Harvard School of Public Health, Channing Laboratory.

Transport and Transformation of Natural and Synthetic Steroid Hormones at Beef Cattle and Dairy Concentrated Animal Feeding Operations (CAFOs). University of California - Berkeley, University of California - Davis, University of Nevada - Reno.

Assessing Occurrence, Persistence and Biological Effects of Hormones Released from Livestock Waste. University of Wisconsin.

Use of Biomarkers and Physiologically Based Pharmacokinetic (PBPK) Modeling in Risk Analysis for Developmental Effects of Chlorpyrifos. Clark University, Columbia University.

Bioavailability and Fates of CdSe and TiO₂ Nanoparticles in Eukaryotes and Bacteria. University of California - Santa Barbara, McGill University.

Development of a PBPK Model for Interpreting Biomonitoring Data on Carbaryl and Other N-Methyl-Carbamates. The Hamner Institutes.

Aquatic Toxicity of Carbon-Based Nanomaterials at Sediment-Water Interfaces. University of Missouri - Columbia, Columbia Environmental Research Center, USGS.

An Integrated Computational Framework for the Interpretation of Organophosphorus Pesticide Biomarkers. Colorado State University, Mississippi State University - Main Campus.

Ecotoxicology of Underivatized Fullerenes (C60) in Fish. University of Tennessee - Knoxville.

Determination of Aggregate and Cumulative Exposures of Perfluorinated Compounds Consistent with Biomarkers of the Compounds Using Simulation Modeling of Exposure and Pharmacokinetics. The LifeLine Group, Inc., Center for Human Health Assessment CIIT Centers for Health Research, University of Ottawa's Institute for Population Health.

CYP-Specific PBPK/PD Models to Interpret Biomarkers for Organophosphate Pesticides. State University of New York - Buffalo.

The Fate and Effects of Nanosized Metal Particles along a Simulated Terrestrial Food Chain Investigated Using Genomic and Microscopic Techniques. University of Georgia.

Database and Tools for Investigation of Climate-Mediated Human Disease. Washington Hospital Center.

Transport/Fate/Ecological Effects of Steroids from Poultry Litter & Evaluations of Existing/Novel Management Strategies. Wye Research and Education Center, Maryland Department of Natural Resources, School of Medicine at the University of Maryland, Virginia Institute of Marine Science.

Fate of Hormones in Waste from Concentrated Broiler Feeding Operations. University of Georgia, USDA-Agriculture Research Service.

Innovative and Affordable Tools and Technologies for Sustainable Public Health Protection

Mapping Regional Development for Smart Growth Planning to Minimize Degradation of Water Quality and Enhance Green Infrastructure. Maine Department of Inland Fisheries and Wildlife.

Ecological Systems Approach to Protect and Restore Sustainable Water Quality and Water Quantity on a Watershed Basis

Enhancing Ecosystem Services in a High Risk Agroecosystem of the Interior Pacific Northwest in the Face of Climate Change and Land Use Intensification. Oregon State University.

Introducing the Water Research Quarterly

(continued from first page)

not do justice to the amount of quality information that could be made available to OW. We changed the format to target 2-double-sided pages for each Water program priority theme identified in April 2010 for Pete Silva (AA-Water) and Paul Anastas (AA-ORD): *Protecting Aquatic Life and Human Health from Chemicals and Microbes in Water, Innovative and Affordable Tools and Technologies for Sustainable Public Health Protection, and Ecological Systems Approach to Protect and Restore Sustainable Water Quality and Water Quantity on a Watershed Basis*. We will also include, as needed, some special "appendices," such as "Other Products from ORD," and listings of recent grants. So, some editions will be larger than others and there certainly will be some edition-to-edition adjustments. Even with the longer format, much was left on the "cutting room floor".

To optimize the content, the inaugural format that you will see in the *Quarterly* is a bold "headline or title," sometimes followed by a brief sentence introducing the findings, and then an electronic link to the complete document or more detailed information. For some works-in-progress from ORD, only a contact name may be available. We have tried to use the "words" of the original source both for the accuracy and integrity of the material. This may result in the occasional entry that gives you pause, such as "*Antidepressants in water make shrimp suicidal*," but this was "the headline" that announced a new paper about pharmaceutical effects on aquatic biota. And it may lighten up the weight of the content! ☺

I certainly hope you will find at least one, if not many, items of interest in this and future *Quarterlies*. We are anxious for your feedback. Does the format and content work for you? Let us know.

Thanks,

Mary Reiley
